

## Vaccine Reminders

With the Pfizer-BioNtech and Moderna vaccines, **you need 2 doses** in order to get the most protection. Schedule your second dose in 21 (Pfizer-BioNtech) or 28 (Moderna) days. For the Johnson & Johnson vaccine, only **one dose** is necessary.

Vaccine-conferred protection **takes 2-3 weeks after your final dose to kick in**. Until then, it has not reached full efficacy.

## Even after getting the vaccine, continue to:

- Cover your mouth and nose with a mask
- Stay at least 6 feet away from others
- Avoid crowds
- Wash your hands often

## Why should I continue to follow safety protocols?

### Efficacy

One out of every 20 people who get the vaccine could still get a moderate to severe COVID-19 infection.

### Individual Transmission

Vaccinated people might still be able to spread COVID-19, and we don't know how long vaccine-conferred protection lasts.

### COVID-19 Variants Exist

Vaccines might not be able to confer protection against all variants.

### Community Spread

It will be some time until enough people are vaccinated to impact the community spread of the virus.

## What to Expect After Getting the COVID-19 Vaccine
